Projects

Hiring Portal   **January 2024**

Using React.js for the front end and back end, Supabase for database administration, and Clerk for Google Authentication, a full-stack hiring site was created. Recruiter and applicant profiles, job posts, saved/favorite positions, and real-time application monitoring are among the features that allow candidates to examine application histories and statuses across organizations.

Event Management   **July 2023**

Created a web interface for managing and showcasing college activities with React.js. important features including user registration, event listing, and an admin panel for event management were implemented. React Router was used for navigation and Fetch API for API queries.

Currency Converter NPM Package   **January 2023**

Developed a JavaScript-based npm package for currency conversion utilizing a free currency API. Implemented features to fetch real-time exchange rates, support conversion between major currencies, and ensure ease of integration. Published and actively maintained the package on the npm registry to facilitate real-time currency conversion for developers worldwide.
